

Lesson 3 Reports

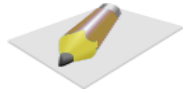

Lesson objectives

- Explain about Sterling File Gateway reports.
- Create reports for the processed transactions.

Introduction

- Reports are the document containing information organized in a required format.
- Reports are created periodically, to know the status of the system during peak and non-peak transaction hours.
- Review history of incoming and outgoing documents, and place the information on a chart showing daily, weekly, and monthly processing trends.
- Report charts determines peak volume processing levels according to historical processing methods.
- In addition to Sterling File Gateway report, review the other reports, such as the Database usage report, performance statistics report and the cache usage report, to determine processing levels.

Exercise

1. Generate report for the failed and successfully processed transactions.

Completed lesson objectives

- Explain about Sterling File Gateway reports.
- Create reports for the processed transactions.
