

Lesson 1: About Sterling B2B Integrator

Lesson 1 Objectives

- List Typical Business Process Problems
- Explain the basics of Sterling B2B Integrator
- List the benefits of Sterling B2B Integrator
- Identify Sterling B2B user Interfaces

Overview

Sterling Integrator is a dynamic application that allows for real time integration between internal business units and external between you and your trading partners. It handles complex routing, translation and flexible integration.

Typical Business Process Problems

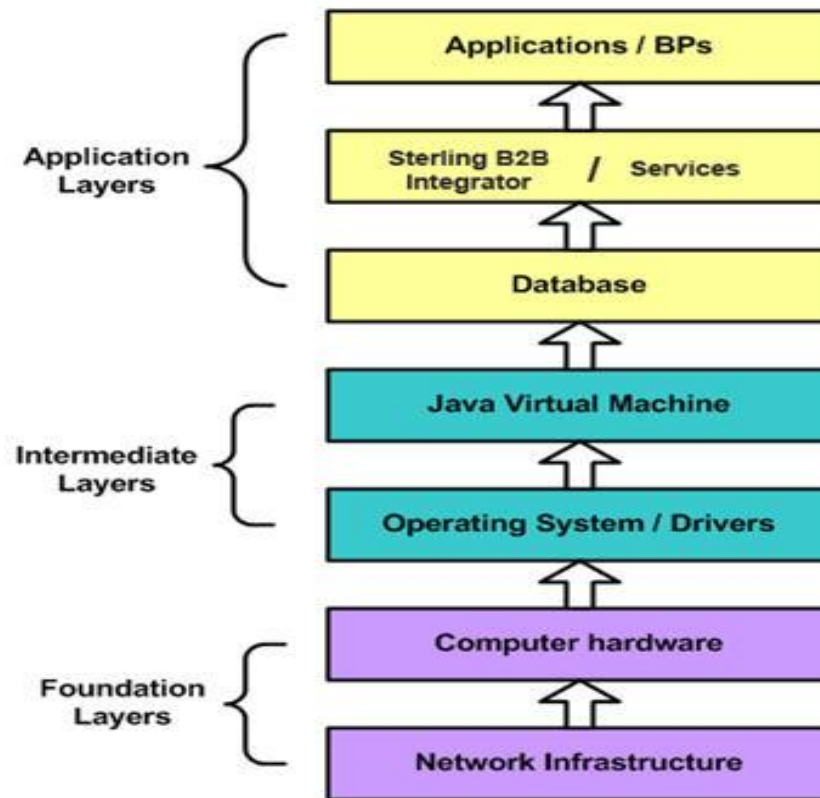

- Slow Response times
- Human Error
- Cost to complete a transaction
- Low Customer Service Levels

Benefits of Sterling B2B Integrator

- Quick response times
- Reduce human error
- Reduce cost to complete each transaction
- Improve customer satisfaction
- Increase revenues

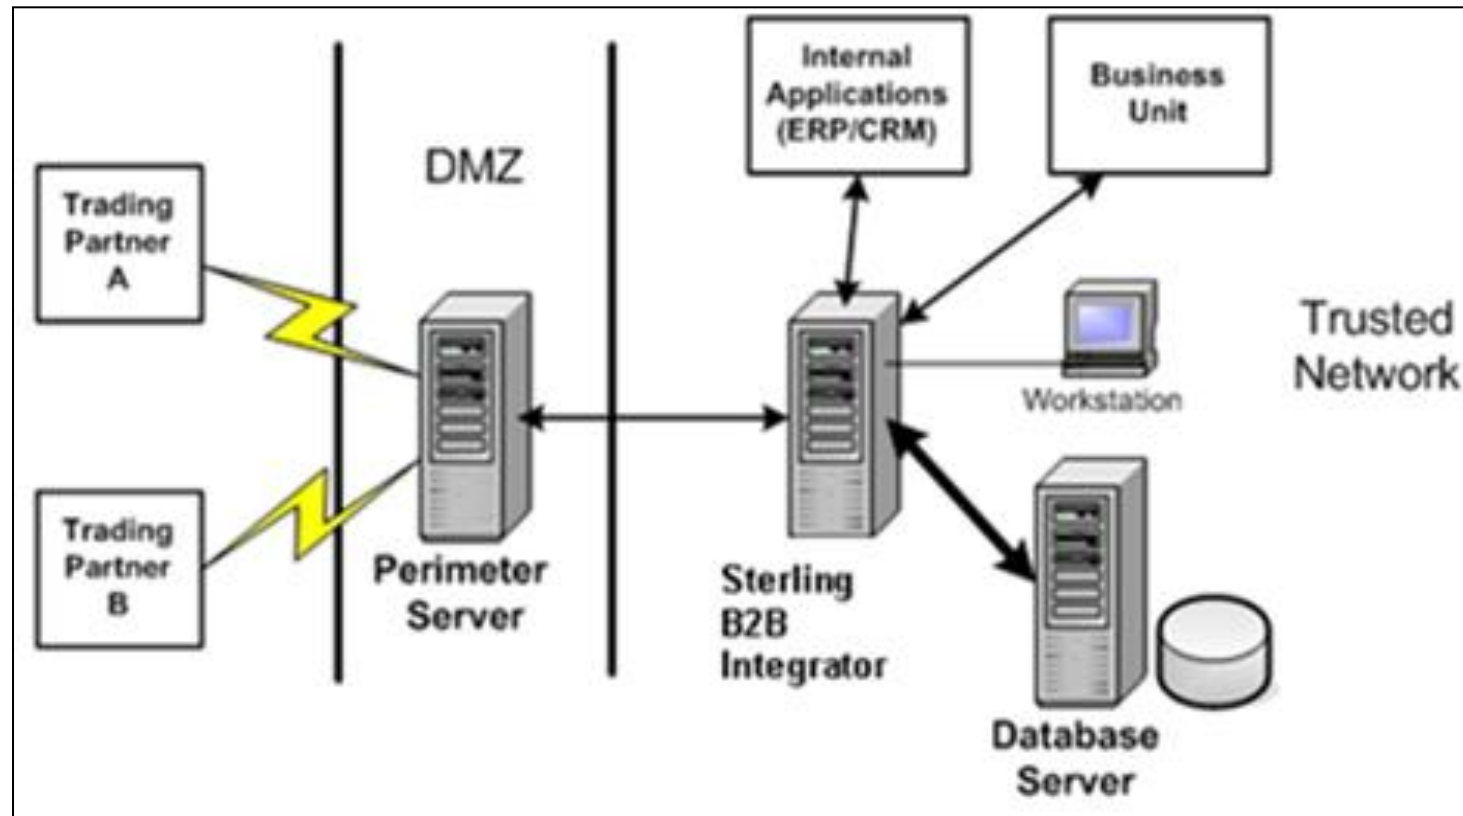

Sterling B2B Integrator System Hierarchy

The Sterling B2B Integrator environment can be viewed as a layered hierarchical model.

High-Level Architecture

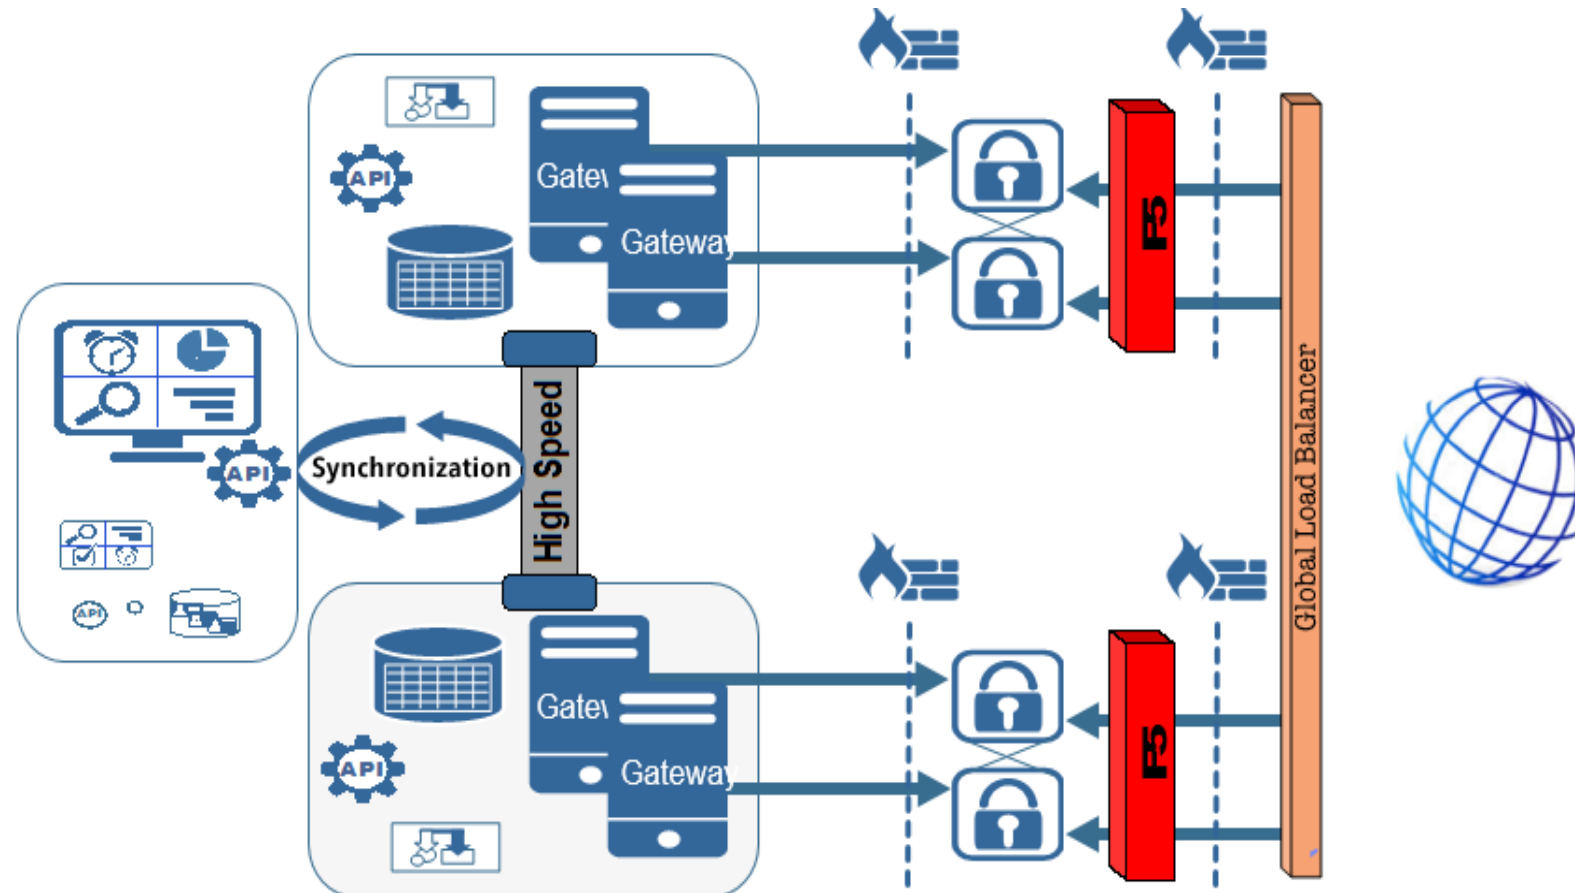

The Sterling B2B Integrator physical components architecture:

High-Level Architecture

(contd..)

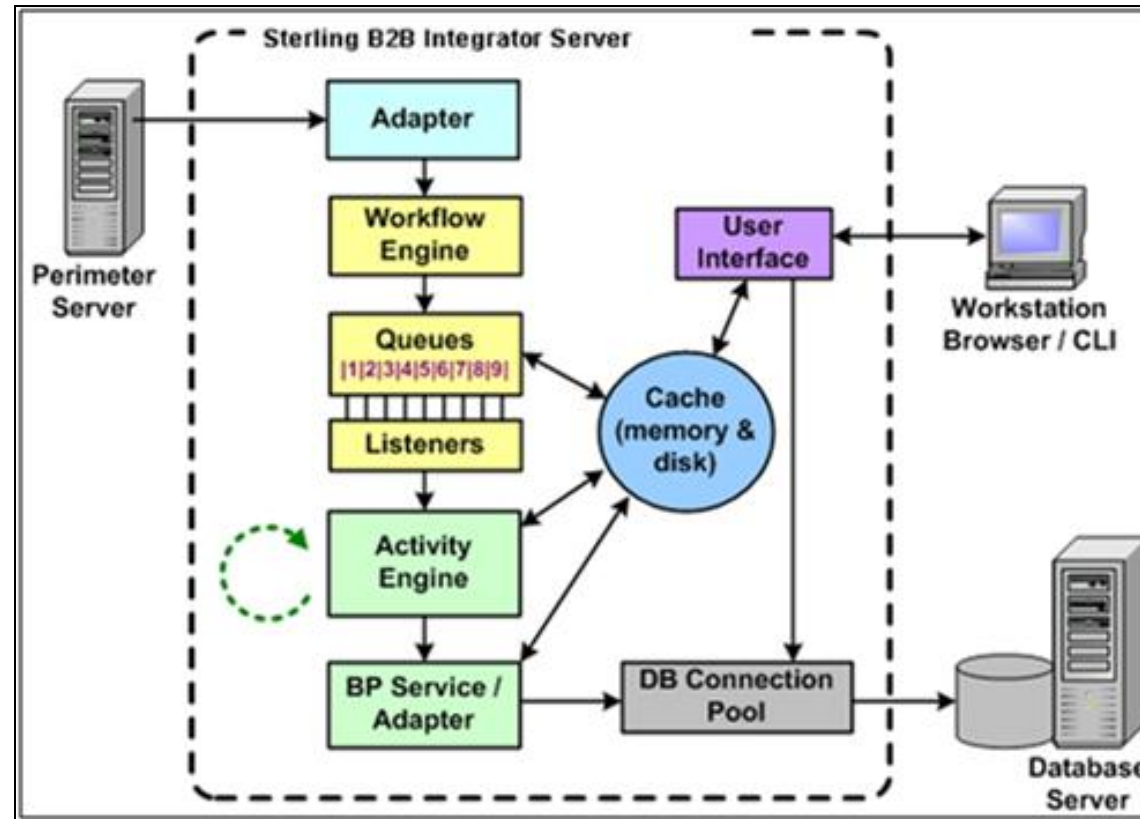

Another view of Sterling B2B Integrator physical components architecture:

High-Level Architecture

(contd..)

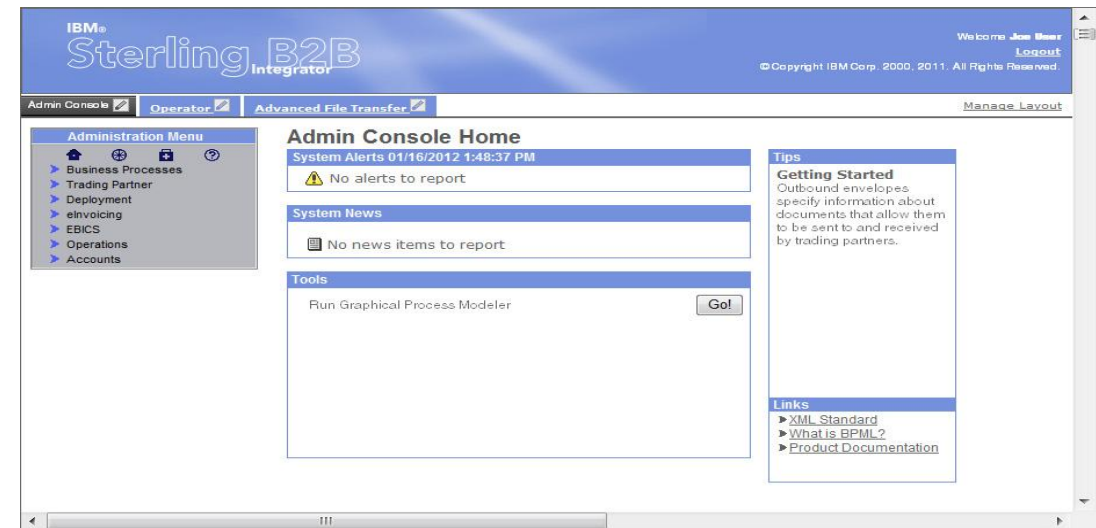

The major internal components architecture of Sterling B2B Integrator:

User Interfaces

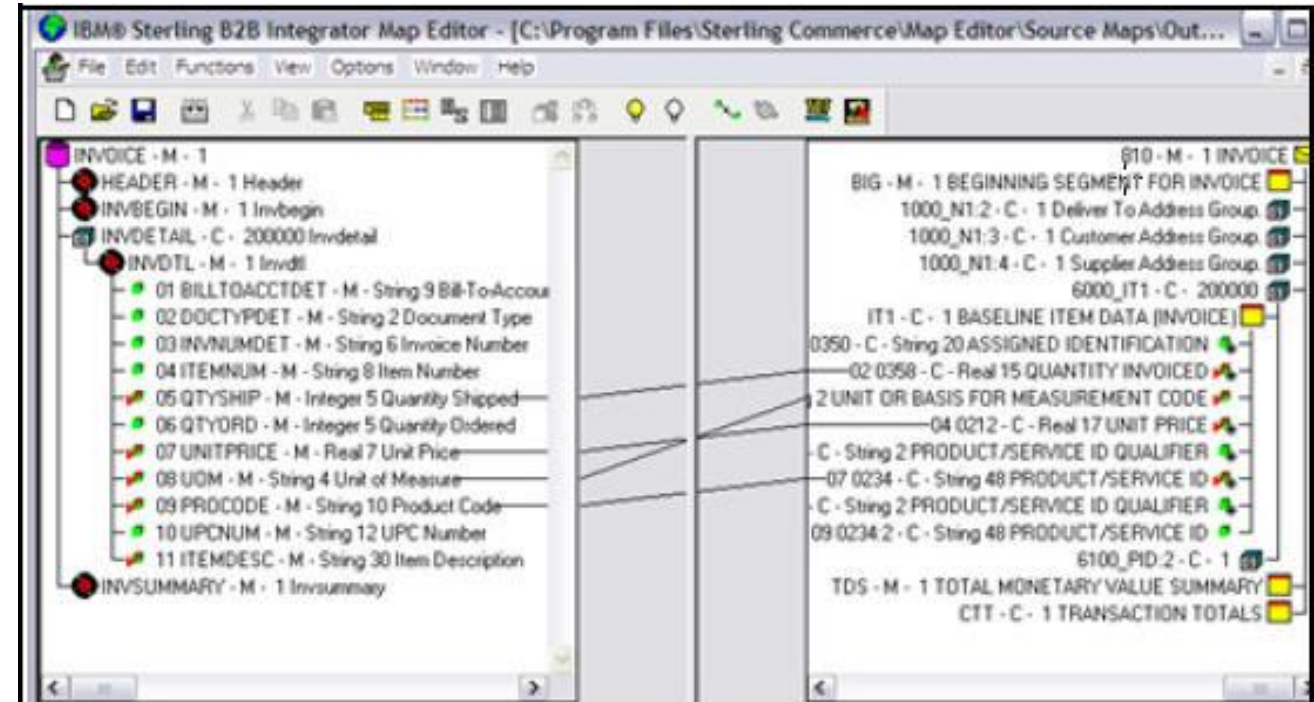

Three main user interfaces:

- The Administration Interface
- The Sterling B2B Integrator Map Editor
- The Graphical Process Modeler

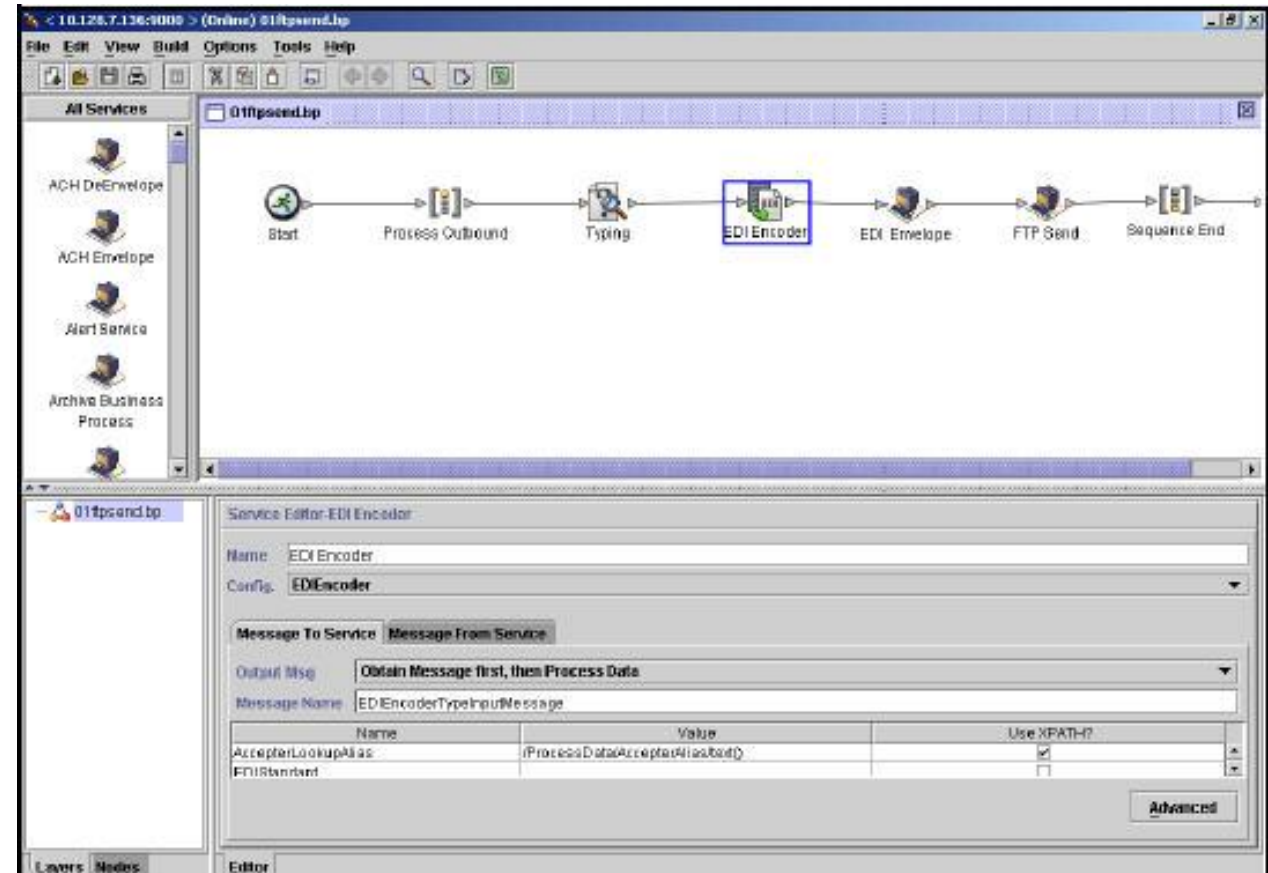

Sterling B2B Integrator Map Editor

- Is used to represent the translation of one type of input data to a different type of output data
- Supports industry standards and customization for internal file types
- Download from the Admin Console
- Runs on Windows

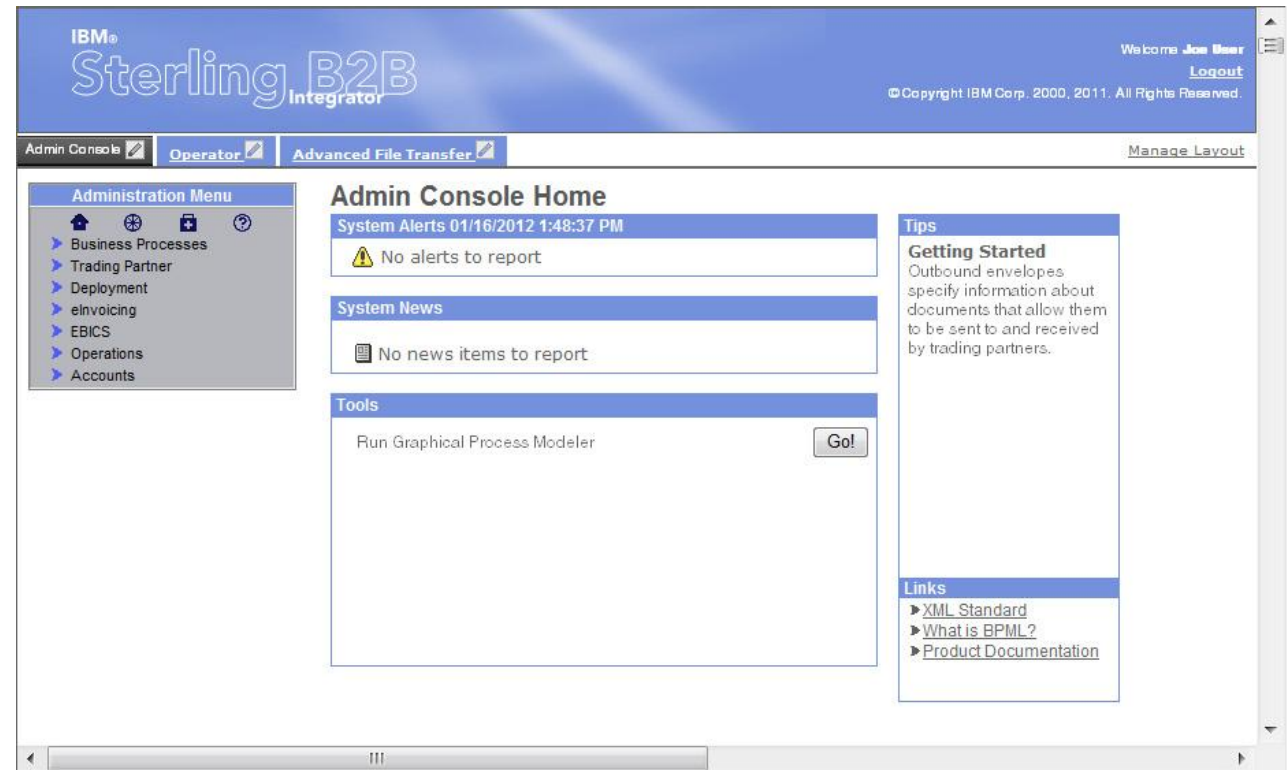

Graphical Process Modeler

- The Graphical Process Modeler (GPM) is used to represent the BPML code of a business process as a graphical model
- Graphical icons are used to represent services and BPML tasks
- Writes BPML code in the background as you configure the stencils.

The Admin Console

- The Sterling B2B Integrator Admin Console interface allows you to set up, configure, and maintain the system.
- There are six main areas in the Sterling B2B Integrator Administration Interface
 - Business Process
 - Trading Partners
 - Deployment
 - eInvoicing
 - Operations
 - Accounts

Important! When working in the Admin Console do not use the browser back button

Admin Console (continued)

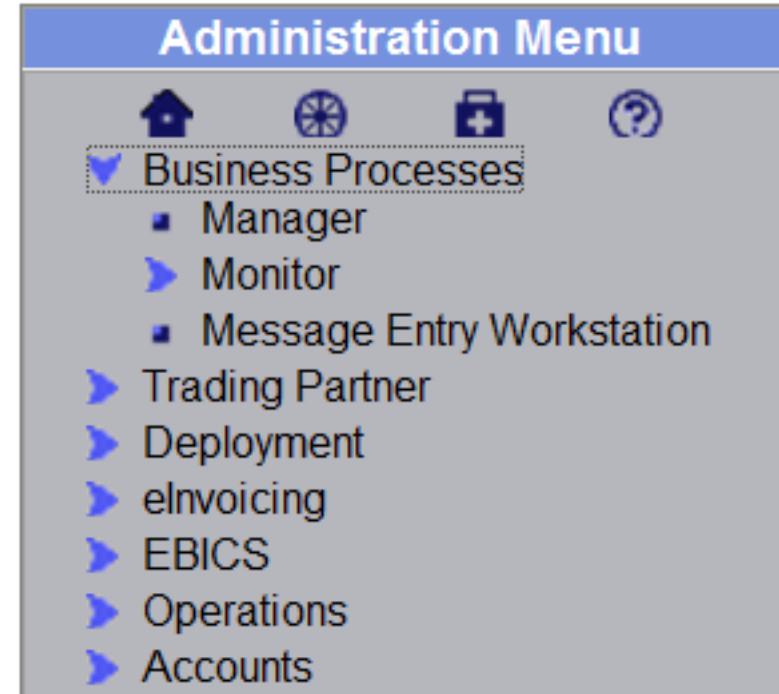

There are six main areas in the Sterling B2B Integrator Administration Interface:

- Business Process
- Trading Partners
- Deployment
- eInvoicing
- Operations
- Accounts

Components of the Administration Menu

Business Process Manager:

- Download Java WebStart
- Run the Graphical Process Modeler
- Create new process definitions
- Search for process definitions
- List process definitions

Business Process Monitor – Current Processes

Displays a summary of the processes in Sterling B2B Integrator – Statuses are color coded:

- **Green** – No Errors or warnings during processing
- **Red** – Errors or warnings encountered during processing

From this screen, you can:

- Review detailed information
- View business process definitions
- Obtain document information

Business Process Monitor – Central Search Screen

The Administrator Interface Continued

You can locate and view business processes based on specific search criteria:

- Business Process name
- Status
- Start Date from
- Start Date to

Business Process Monitor – Current Activities Search screen

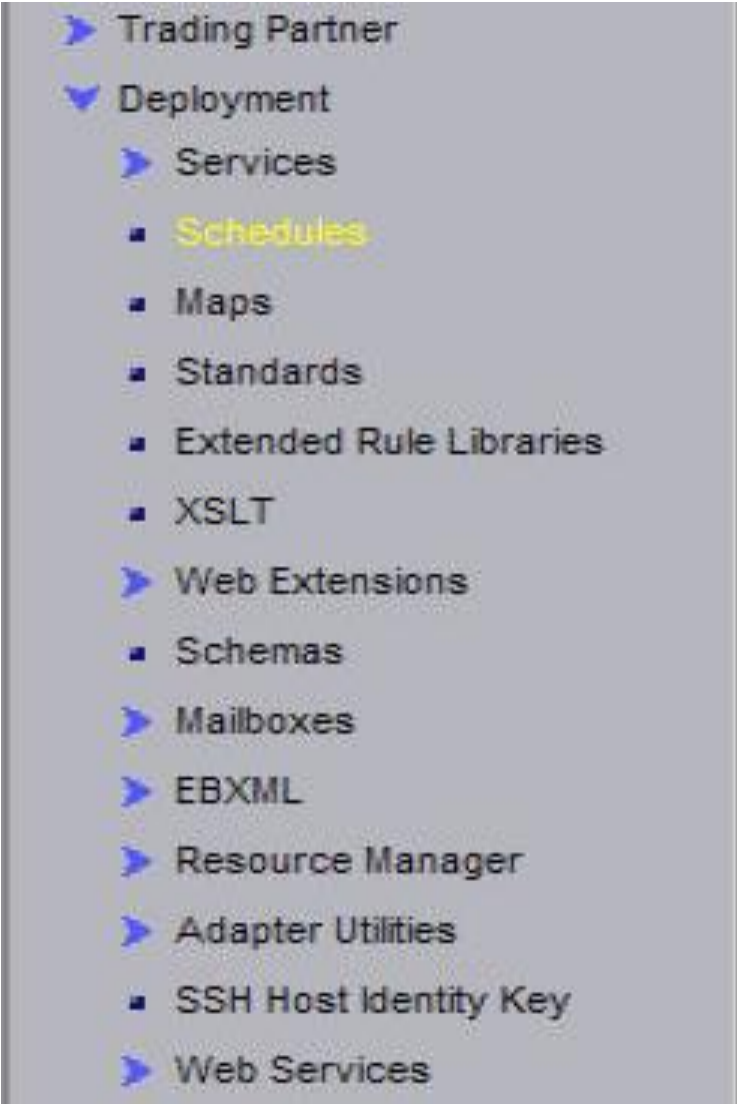

The Administrator Interface Continued

This page is used primarily to look at adapters and the status of large file transfers and provides you the ability to search for service activity based on the following criteria:

- Service type
- Service Name
- Service Activity type
- Not Update Since: Date/Time
- Started Before: Date/Time

Deployment

The Deployment menu allows you to configure services and maps. Details of the Trading Partner, Operations, and Accounts menus will be discussed in detail later in this class.

- 
- ▶ Trading Partner
 - ▼ Deployment
 - ▶ Services
 - Schedules
 - Maps
 - Standards
 - Extended Rule Libraries
 - XSLT
 - ▶ Web Extensions
 - Schemas
 - ▶ Mailboxes
 - ▶ EBXML
 - ▶ Resource Manager
 - ▶ Adapter Utilities
 - SSH Host Identity Key
 - ▶ Web Services

Deployment Menus

- **Services:**
 - Install/setup and configure services
- **Schedules:**
 - Locate and configure certain services and adapters to invoke a business process to run at a certain time.
- **Maps:**
 - Download/install Map editor. Check in/out maps, and find maps
- **Standards:**
 - Enables you to download and install the standards you will need for data translation.
- **Extended Rule Libraries:**
 - Manage and manipulate the extended rules

Deployment Menus

- **Web Extensions:**
 - Install, manage and manipulate Web Template Translator application.
- **Schemas:**
 - Enables you to load an XML Schema or DTD into the system
- **Mailboxes:**
 - Organize, store and manage trading partner documents
- **EBXML**
 - The EBXML option enables you to manage and locate Business Process Specification Schemas (BPSS) and Collaboration Protocol Agreements (CPA).
- **Resource Manager**
 - The Resource Manager enables you to create and locate resource tags, and import or export resources.

Deployment Menus

- **Adapter Utilities**
 - Create and manage DTDs for Siebel Systems
- **SSH Host Identity Key**
 - The SSH Host Identity Key enables you to create the necessary keys for SSH and SCP Protocols
- **Web Services**
 - A Web Service Configuration enables you to locate and configure certain services and business processes to be exposed as web services.

Lesson Summary

In this lesson we:

- Understood business process problems
- Learned the benefits of Sterling B2B Integrator
- Learned the Basics of Sterling B2B integrator
- Learned the Sterling B2B Integrator user interfaces

**Congratulations, you have completed Lesson 1,
IBM Sterling B2B Integrator Fundamentals!**
